

With the present document, Inotec electronics GmbH provides a general statement regarding compliance of its products with

- 1) REACH Regulation
- 2) RoHS Directive
- 3) CMR Conflict Minerals Reporting

1) REACH

As a "downstream user" and "supplier of a manufactured item" according to EU-regulation 1907/2006 REACH we comply with our obligation to communicate about „Substances of Very High Concern" (see ECHA SVHC-candidate list <https://www.echa.europa.eu/candidate-list-table>) contained in our products. According to this regulation, the smallest component of an assembled product does represent the reference value.

We herewith inform that our articles in product families

DCC (crimp contacts),
CF (crimp flanges),
KD (cable glands),
KOS (coding pins) and
DBS400 blind plugs

do contain brass / copper alloys with > 0,1% lead (Pb CAS 7439-92-1, EG 231-100-4) corresponding to Art. 33 REACH regulation.

As Pb is only contained as alloying element, there is no direct exposition and no further safety instructions of advisory labelling on the concerned products are required.

We do not have knowledge of any further SVHH or SVHC candidates with share of > 0,1% contained in our products.

2) RoHS

We herewith confirm compliance of all products provided to you by Inotec electronics GmbH according to Directive 2011/65/EU RoHS 2.0 and its amendment by EU 2015/863. You may find a product-specific confirmation including material information on our corresponding data sheets.

3) CMR

Within the limits of its possibilities Inotec electronics GmbH does also make sure that no conflict minerals according to art. 1502 section e 1 and 4 of Dodd Frank Acts (USA), are contained in its products. The company will provide an up-to-date Conflict Minerals Reporting Template (CMRT) of Responsible Minerals Initiative (RMI) upon request.
